CUSTOMISE

STANDARD

Choose from select
fan finish combinations

2 - 3 week manufacturing lead time

No customisation charges

CUSTOMISED

Choose from our range of motor &
fan blade finishes

4 - 5 week manufacturing lead time

Customisation charges applicable

5

ROD LENGTH

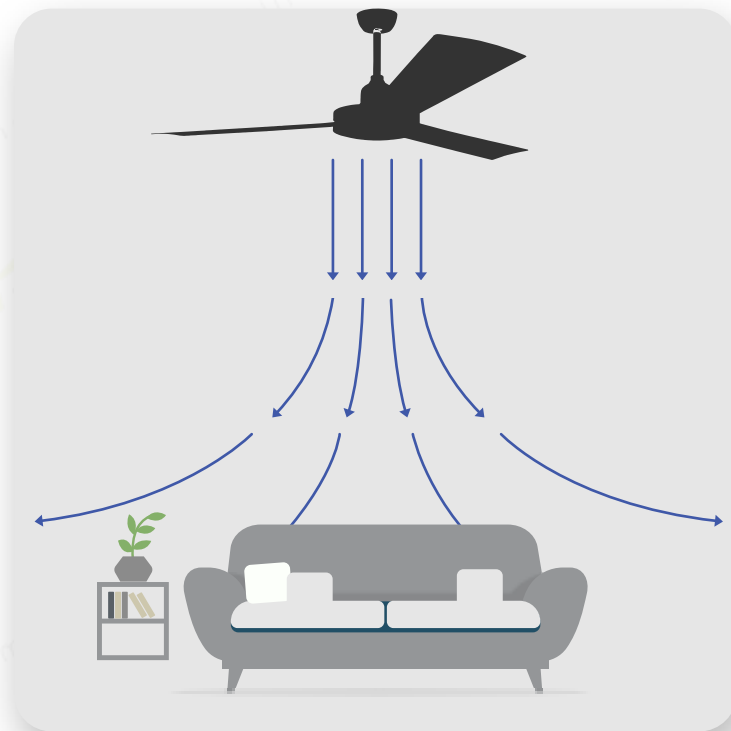

1. Keep Ceiling fan between 8 to 9 feet from the Ground
2. Minimum distance between Fan blade and ceiling should be 7 inches and more for sizes larger than 1200 mm.
3. Downrod Length can be customised to any length
4. Length upto 1.5 meter in single piece
5. Length greater than 1.5 meter in multiples with jointers

FACT

Fans with longer rods have LESSER wobble.

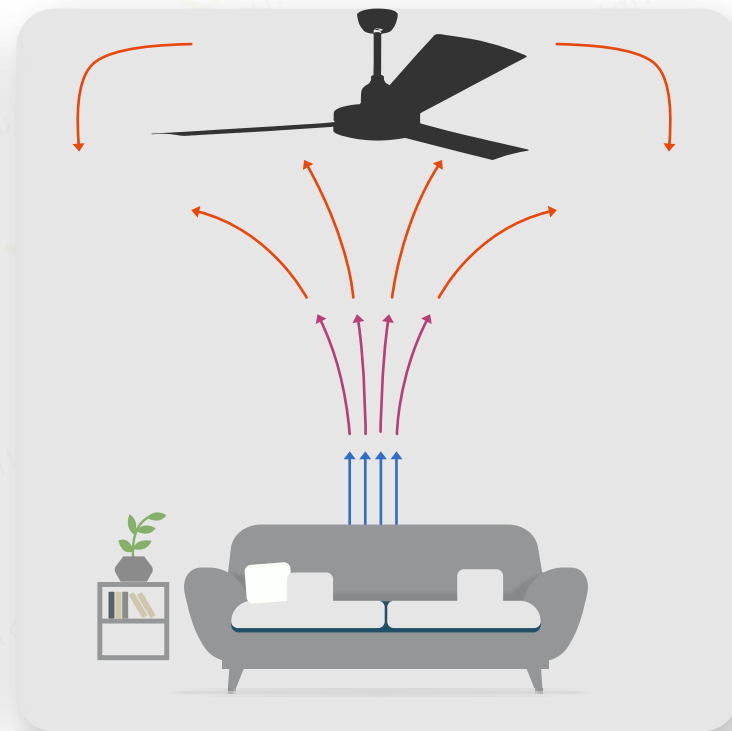

**SELECT
THE
RIGHT
FAN FOR
YOUR
SPACE**

REVERSE FUNCTION

SUMMER OPERATION

clockwise operation pushes air down with a cooling breeze saves cooling cost by supporting air conditioners

WINTER OPERATION

anti-clockwise operation recirculates warm air trapped on the ceiling down through the walls without creating a breeze. Saves heating cost by eliminating hot air stratification.

ACCESSORIES

- 4 Fan speeds
- Light ON/OFF function (for Fan with Light kits)
- Operate multiple fans with One remote
- Radio control - no need to point at sensor

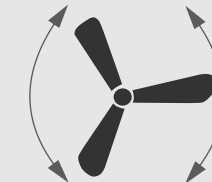

FAN REMOTE CONTROL

- Solid State Choke type controller
- Extreme Long Life
- Heavy Duty
- No Electronic Parts
- Suits all Models

5 SPEED WALL CONTROLLER

- Save Electricity in Winters
- Pushes trapped HOT Air Down from the ceiling
- Switch to be Manually operated

REVERSE OPERATION

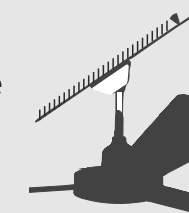

- Down-rods of ANY Length up to 6 feet in Single Length
- Down-rods with Joints in ANY LENGTH

CUSTOM LENGTH RODS

- 16 Watt High Power
- Long Life DIMMABLE driver
- SMD Led with long Life
- Supplied with 3 Speed remote controller (to operate fan and light separately)

LED LIGHT KIT

- Special Mount for raked / slant ceilings
- Can mount upto 25 Degree slope
- Remote Control Ready
- Ceiling must take load of 50 Kgs. min.

SLOPE ROOF MOUNT

HUGGER FANS

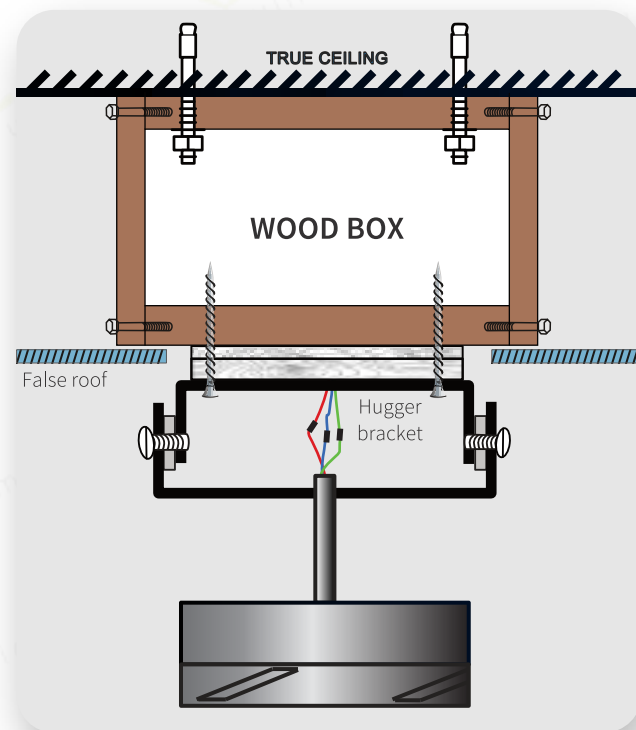

WHEN TO USE

LOW CEILING HEIGHT SPACES

Spaces where available height is less than 2.5 meters (8 feet) is ideal for Hugger fans. For rooms with ceiling height more than 3 meter (9 feet) Rod type fan is recommended for better performance

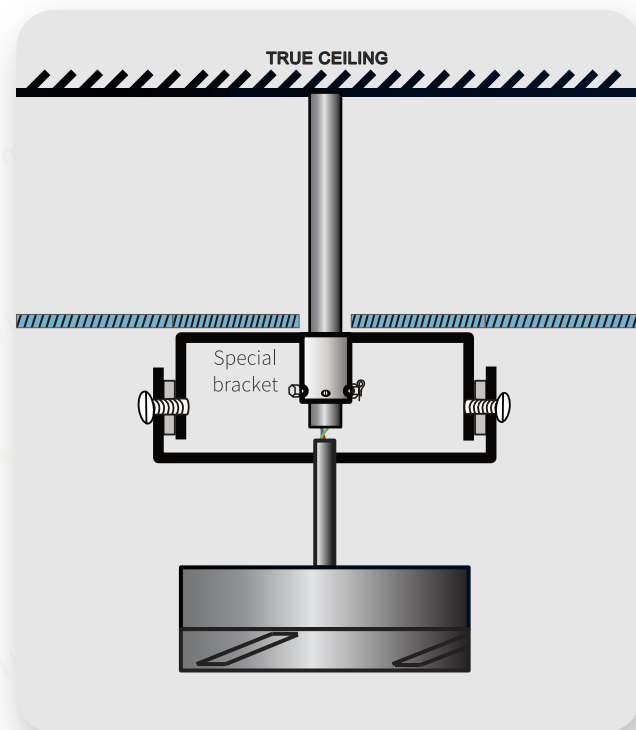

STANDARD MOUNTING

FAN BOX MOUNTING

Wood box is provisioned inside the false roof which bears the load of Hugger fan. This must be done during the false roof installation. *Hugger can also be installed directly on True Ceiling when false roof is not present.*

OPTIONAL MOUNTING

FAN ROD MOUNTING

When a market fan rod is present, Hugger fans can be installed with a Special Bracket. This method requires more effort to install. Fan performance or aesthetics are not affected.

(chargeable extra)

HOME AUTOMATION

When it comes to automation-compatible ceiling fans, there are few important considerations to keep in mind. In addition to the motor type and control options, it's also important to consider the type of speed controller that you'll be using, as well as any compatibility issues that may arise when using automation systems.

- Stepped type speed controllers are preferred
- Triac dimmer speed controllers are not recommended, they can cause a humming sound in the fan.
- If using an automation speed control, it's important to disconnect any remote controls that are currently in use to avoid interference between the two systems.
- Similarly, if using a remote control for the ceiling fan, it's important to disconnect any other speed controllers that are currently in use.
- Not all automation systems provide the same number of speed settings, so it's important to choose a system that offers the level of control desired.

USE CASE 1

Home automation with fan speed controller

- Choose Windmill fans AC Motor without Remote controller
- Fans connected to Automation fan speed controller will control the fan speeds as per the system capability.
- NOTE: All Automation system speed control settings are programmed differently, fans may run higher or slower depending on the speed settings. Windmill fans cannot do anything to control this.
- Reverse operation if opted must be switched manually. It cannot be automation controlled.

USE CASE 2

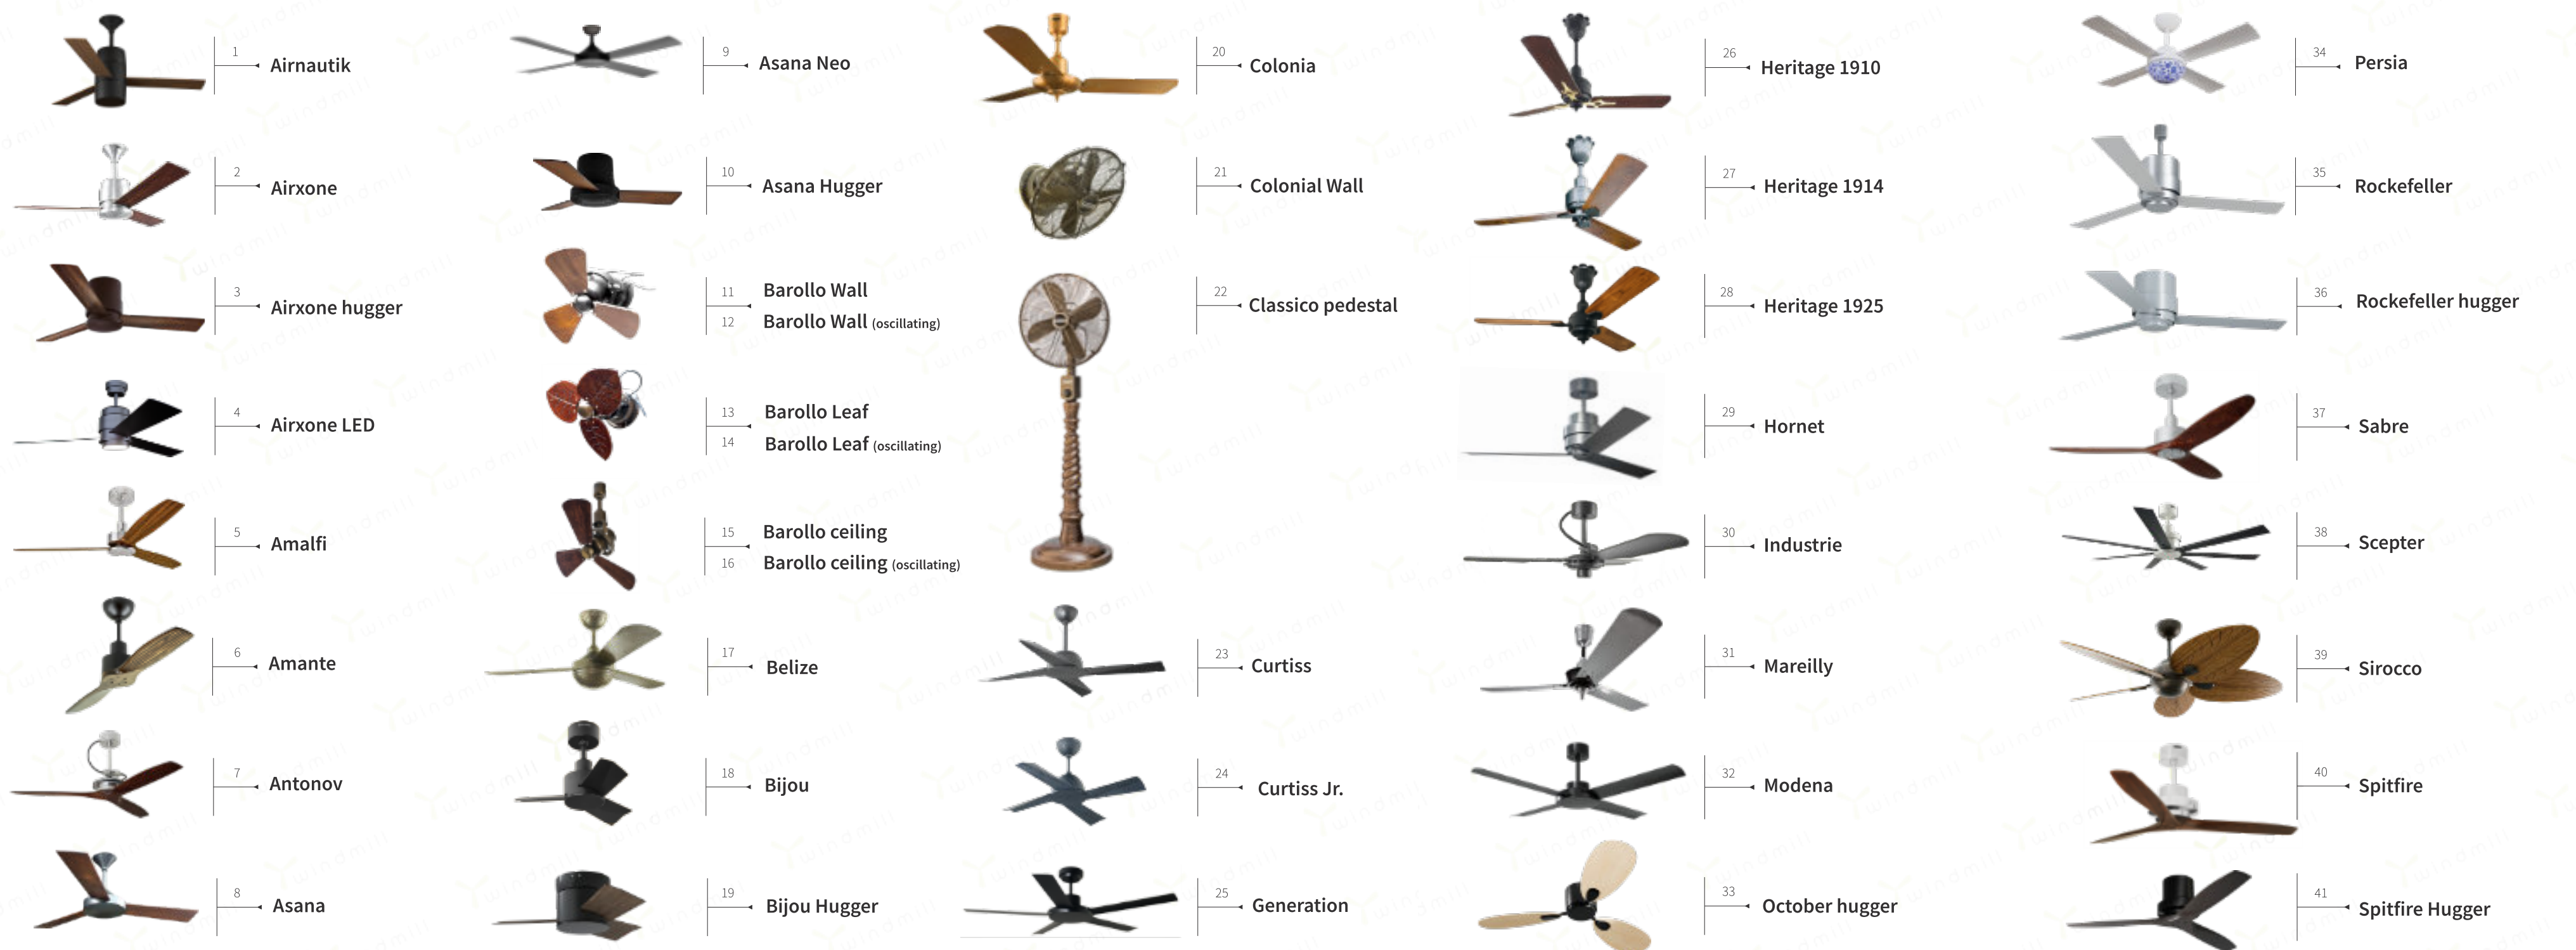

Home automation with Fan ON/OFF (No Automation speed controller)

- Select any Windmill Fan model WITH Remote speed control
- Fan ON/OFF will work with Automation system and speed can be controlled with remote.
- Windmill Fan remotes have LAST OPERATION MEMORY , so when automation turns on the fan, it will automatically run at last set speed.
- Reverse operation if opted must be switched manually. It cannot be automation controlled.

USE CASE 3

Home automation with IR (Infra-red) or RF (Radio Freq.) Blaster

- Select any Windmill Fan model WITH Remote speed control. Please ensure RF or IR is mentioned in the Order sheet. Fans will be installed with the same receiver.
- IR or RF blaster can be trained/learn the operating frequencies of Windmill remote.
- Once trained/learn , hand remotes to be kept aside and fans will operate on Automation system as per the system capability.
- Reverse operation if opted must be switched manually. It cannot be automation controlled.

Persia

The art of Blue Pottery is a culmination of Chinese glazing and Persian decorative arts, bought to India in 14th Century.

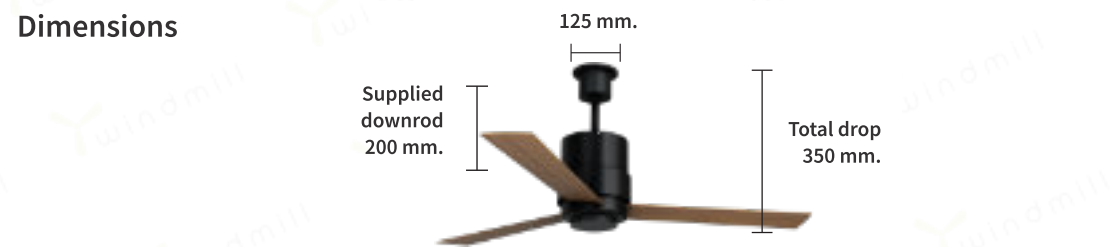

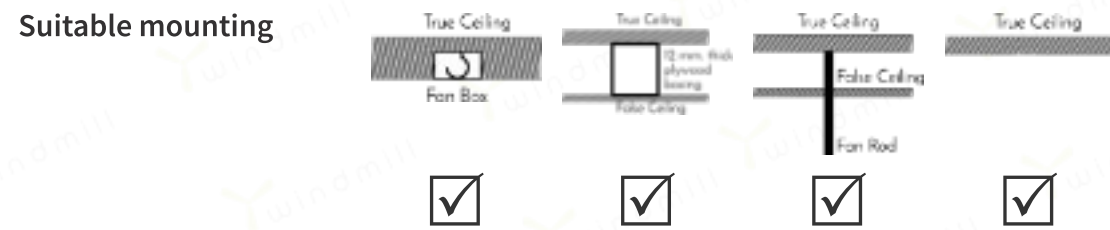

In 19th Century this art was bought to Jaipur by ruler Sawai Ram Singh II.

"Persia" pays tribute to this eye-catching traditional art of Jaipur by using it for the First time ever with a ceiling fan.
